## MILLARD PUBLIC SCHOOLS

## BOARD MEETING NOTICE

The Board of Education will meet on Monday, July 21, 2003 at 5:00 p.m. at the Don Stroh Administration Center, 5606 South 147th Street.

Public Comments on agenda items - This is the proper time for public questions and comments on agenda items only. Please make sure a request form is given to the Board VicePresident before the meeting begins.

## A GENDA

## 1. Budget Options

Minutes
Board of Education
July 21, 2003
The members of the Board of Education met for a Committee Meeting on Monday, July 21, 2003 at 7 p.m. at the Don Stroh Administration Center, 5606 South 147th Street. The discussion was on the topic of budget options.

PRESENT: Jean Stothert, Mike Pate, Linda Poole Brad Burwell, Julie Johnson, and Mike Kennedy.

Others in attendance were Keith Lutz, Ken Fossen, John Crawford, and other administrators.

Ken Fossen presented four budget scenarios in answer to some questions the board had at a previous meeting. One of the questions was how a new school would be financed. Dr. Fossen reviewed with the board how the general fund levy can be reduced, which results in less money in taxes being raised in the general fund than is needed, thus reducing the cash reserves. But, then to offset the decrease in the general fund levy there is an increase in the building fund levy by the same amount. You repeat the same steps again the next budget year. Thus, in two years there should be enough in the building fund to build a new school.

Another suggested option was to investigate a lease/purchase agreement when having a new building constructed.

Other scenarios reviewed answered questions as to: 1) what would the budget projections look like if the district stayed at $3.1 \%$ for spending growth and used the full $\$ 1.10$ levy authority; 2) what would it look like if the district limited the levy to $\$ 1.08$; and 3 ) would it help the district if there were new interlocal agreements.

The board appeared to be in consensus about not wanting to use reserved funds in financing a new school. One suggestion from the board was to look to see what the impact would'be to redraw boundary lines. They board agreed that educating the community about the complexity of the budget is a necessary step.

Keith Lutz reiterated that according to the survey that was done last school year, the community would probably not support a bond issue or override, so it is important that the district come up with other alternatives in regards to the budget. He reported that in the past he has kept the reserve at the maximum, so when there were highs and lows, the lows did not seem so severe. Also in the past, bond issues have provided addition funds for a wide variety of projects throughout the district

John Crawford reported that previously a few board members had asked for information on class sizes, so when looking at some of the program issues, in the context of the budget, that they would like to know how building numbers on class size varied over a five year trend.

## Minutes

July 21, 2003
Page 2

Dr. Crawford explained that in collecting data in the three levels, elementary, middle, high school, is very different. Elementary, of course, is easier of the three to calculate. Middle school data is certified staff to student ratios, which includes counselors, media specialists, and psychologists, etc. In the high school, a complex computer program has been written, which makes it easier to go into the scheduling database, and then allows pulling out various class sizes. Unfortunately, because the computer program is new this year there is no five-year trend information. However, the program will most likely be run at least twice during the school year. A program, like the high school, has not been written for the middle school level at this time.

In reviewing the data of class sizes, not only small classes, but also larger classes got the attention of the administrators. There has been some research on the cost savings that would have teachers teaching six out of seven classes in the high schools. All in all, the district is examining other budget options, even keeping in mind the worst-case scenarios.

Mike Pate adjoumed the meeting.

## MEMORANDUM

To: K. Lutz, Supt.
From: K. Fossen, Assoc. Supt.
Re: Info for Special Meeting 5:00 p.m. 7/21/03
Date: July 18,2003

This memo accompanies an Excel workbook named 'Levy Projections- FYE04 Scenarios 7-18-03." The intent of this memo and the attached workbook is to provide some information regarding some budget option questions the board members had at our last meeting.

The questions addressed by this memo are:

## Ouestion \#1: What would the budget proiections look like if we staved at $3.1 \%$ for spending growth and used the full $\$ 1.10$ levv authority (\$1.05 lid plus $\$ .05$ for exclusions - i.e., VESP and 2002 State Aid Recapture)?

The answer can be found in the Excel workbook accompanying this memo. Open the workbook named 'Levy Projections - FYE04 Scenarios 7-18-03" and then open the tab named " $3.1 \%$ - $\$ 1.10$ - Same Reserve."

This information assumes:

1. that the District will realize a growth in student enrollment of one-half percent each year
2. that the District will limit its budget growth in FYE04 to 3.6\% as follows:
a. $0.0 \%$ Basic Allowable Growth
b. $1.1 \%$ Low-Spender Adjustment
c. $1.0 \%$ Board Option
d. $1.0 \%$ Unused Budget Authority
e. $0.0 \%$ New Interlocal Agreements
f. $0.5 \%$ Enrollment Growth
g. $3.6 \%$ Total
3. that the District will limit its budget growth in FYE05 and subsequent years to $3.1 \%$ as follows:
a. $0.0 \%$ Basic Allowable Growth
b. $1.1 \%$ Low-Spender Adjustment
c. $1.0 \%$ Board Option
d. $0.0 \%$ Unused Budget Authority
e. $0.5 \%$ New Interlocal Agreements ${ }^{1}$
f. $0.5 \%$ Enrollment Growth ${ }^{2}$
g. $3.1 \%$ Total $^{3}$
4. that the property values in the District will increase at the rate of 5\% per year
5. that state aid will increase at the rate of $2 \%$ per year
6. that revenues other than state aid and property taxes will remain constant
7. that the District will limit its capital replacement projects (i.e., roofs, parking lots, HVAC, vehicles, equipment, etc.) to $\$ 3.5$ million per year
8. that the cash reserve in the general fund would remain constant
[^0]Under the assumptions noted above, the information indicates that the needs of the general fund would be met with a levy of about $\$ 1.08$. This would permit about $\$ 0.02$ to be placed in the building fund. The amount placed in the building fund, however, would not be sufficient to maintain the ending balance. As a result, the building fund would be exhausted in FYE08.

## Ouestion \#2: What would it look like ifwe limited the levv (qeneral fund plus building fund)to \$1.08?

The answer to this question is contained under the tab named " $3.1 \%$ - $\$ 1.08$ - Same Reserves." This tab assumes the same facts as in Question \#1 with the exception of limiting the total levy for both the general fund and the building fund to $\$ 1.08$.

Under this fact scenario, you will note that the needs of the general fund are met; however, since very little money is going into the building fund, the building fund is exhausted during FYE06.

## Ouestion \#3: Is there anv wav to use our general fund cash reserve to build a new elementary school?

Yes, but we have to do it in a round-about manner. We cannot spend the money directly from the general fund because we would exceed the spending lid. There is, however, no spending lid on the building fund, so, we need to somehow get the cash reserve from the general fund into the building fund - and it can be done.

In order to decrease the amount of money in the general fund (i.e., cash reserves) and increase the amount of money in the building fund (i.e., to build a new elementary school), the District could do the following:

1. In FYE05, decrease the general fund levy to $\$ 0.05$ below what is needed. This will result in about $\$ 3$ million less in taxes being raised in the general fund than is needed - thus, reducing the cash reserves by about $\$ 3$ million.
2. In FYE05, increase the building fund levy by $\$ 0.05$ (i.e., to offset the decrease in the general fund levy). This will result in about $\$ 3$ million of tax money going to the building fund.
3. In FYE06, repeat the above two steps again. This will mean that there is now about $\$ 6$ million less in the general fund cash reserves and about $\$ 6$ million accumulated in the building fund (for the construction of a new elementary school).
4. Build the $\$ 6$ million new elementary school in FYE05-FYE06.

Although the above maneuvers would accomplish the task of building a new elementary school, there would also be additional costs that would need to be considered. These would include:

1. Equipment (i.e., computers, tables, chairs, overhead projectors, etc.)
2. Staffing (i.e., principal, secretary, etc.)
3. Support services
a. Maintenance, grounds, and custodial personnel and equipment
b. Delivery drivers and vehicle expenses
c. Information technology personnel and expenses
d. Utilities (i.e., gas, electricity, sewer, water, phones, etc.)

For information on this scenario, see the tab named " $3.1 \%$ - \$1.08-New Bldg."

## Ouestion \#4: Can we come up with some new interlocal agreements? Would that help us?

We are currently developing an interlocal agreement related to substitute teacher services. This interlocal could result in additional spending authority in excess of $\$ 1.5$ million dollars.

Would that help us? Yes, if you are looking to spend more money in the general fund. No, if you are trying to reduce your general fund levy in order to increase the levy for the building fund (i.e., to build a new elementary school).

## MEMORANDUM

To: Dr. Lutz
From: John Crawford
Re: Class size data
At the last board discussion on the budget, they asked to see data on building-tobuilding variation in class size. The attached sheets present the information; it varies somewhat with grade-level of the buildings.

Elementary:

- We show five years of history, showing the low and high building-wide averages, and the district average for all elementary schools. The numbers have varied fiom 14-16 at the low end, to 22-24 at the high end. District averages were 20 every year except for 1998-99, when it was 21 . These numbers are actual instructional class sizes. Source of data is the official end-of-September enrollment report fiom each year.

Middle Level:

- Here the available data represent the certified staff to student ratio. This includes all certified staff, not just classroom instructors. Lows ranged from 9 to 12 students per staff to highs of 13-15. Source of data is the district personnel report.

High School:

- The report at the high school level is based on actual class sizes, by teacher by period, for all departments. The first number under "Student Count" is the total number of students enrolled in courses in that department. All these data are as of April, 2003. The "Minimum Class Size" is the smallest number of students assigned to a teacher for any one period; similarly, the "Maximum Class Size" is the largest number of students being taught by a teacher in that department in any one period. The 'Minimum Class Size Average per Teacher' and 'Maximum Class Size Average per Teacher' are the lowest and highest averages for staff within that department (averaging together all the periods that a teacher is with students - not counting study halls). The last column represents the department average, across all teachers assigned to that department. Source of data is the student scheduling database.

At the high school level, we only wrote the computer program to extract this data in 2002-03, so unfortunately, there is no history available yet.

[^0]:    ${ }^{1}$ The new interlocal agreement being considered is for substitute teachers. The interlocal will create immediate spending authority in the year it is approved. For budget projection purposes, we spread it out over several years rather than show it in one year. We would accomplish this by carry unused budget authority from one year to the next until it was exhausted.
    ${ }^{2}$ It should be noted that if student growth is high, the District will be able to spend more. The additional spending, however, will require a high tax levy being devoted to the general fund (and, thus, not being available to the building fund).
    ${ }^{\mathbf{3}}$ Approximately $\mathbf{8 0 \%}$ of the budget is salary and related expenses. Currently, it takes about $\mathbf{2 . 8 \%}$ to "roll" the contract for teachers (i.e., freezing the base pay, allowing experience movement, and increasing health insurance premiums).
